

Github installation

<https://github.com/jfikel/github-classroom-for-students>

These instructions have been adapted for our class here:

Register for an account on Github (<https://github.com>

Install Git for Windows <https://gitforwindows.org/>

OR

Install GIT for MAC <http://git-scm.com/downloads>.

On the Github website create a repository

Lets add a file to that repository

- Create a folder on your machine for this class.
- Create a file (just a text file) in that folder.
- In Windows on the search box enter git bash (a command window should open)
- Type:
 - `git init`
 - `git add *`
 - `git commit -m "initial commit"`
- copy the url of your new repo (go back to the git web page, click the "Code" green button – a dropdown box appears with <https://...>)
- copy that url
- past into the first command and use:
 - `git remote add origin the_URL`
 - `git push -f origin master`
